Anti-Slip Stair Treads

Austin Reynolds' slip resistant stair tread covers, landing covers and flat sheet are ideal to deal with the majority of staircases, walkways and anywhere where there may be a slip hazard.

The product is made from tough durable GRP, perfect for high traffic areas, and has a carbon and silicone grit top surface that ensures a secure surface underfoot.

Full nationwide installation service is available using fully qualified and PTS trained operatives.

Fully complies with the DDA and Building Regulation Legislation.

SurfaceGrip - Landings & Sheet

SurfaceGrip Landing Covers serve the same purpose as SurfaceGrip Treads but their additional depth allows most landing areas and top steps to be covered without the need for joints. Whilst special sizes can be made to order, standard landing covers are available in a maximum of 2400mm wide, 1200mm deep and with a 55mm contrasting coloured nosing.

SurfaceGrip Flat Sheet, which has the same characteristics as the SurfaceGrip Landing Covers are ideal for overbridge walkways, ramps and gangways etc. SurfaceGrip Flat Sheets are a perfect match with the Landing Covers so even very large overbridge spans can be dealt with.

SlipGrip Riser Plates

SlipGrip Riser Plates are the newest addition to the SlipGrip Range. The addition means that not only is the whole of the tread covered but the riser is also completely covered offering a visually better appearance.

Like the Stair Tread Covers, the Riser Plates are made from fibreglass materials so will not rot, twist or warp. The front surface has a smooth finish.

After
Covering the galvanised steel

Sizes

For new build applications, Building Regulations states that all risers should be between 150mm and 170mm. SlipGrip Riser Plates when combined with SlipGrip Tread Covers, with its 55mm nosing means that no cutting is required on the height.

For retrospective works where risers are either larger or smaller than this range the plates can be either cut or supplied in two pieces.

Installing

The Riser Plates are simply bonded onto the riser and the Stair Tread when installed offers a secondary securing method. A bead of black mastic can then be applied all around the Riser Plate.

Colours

The stock colour is matt black. Other colours are available but subject to minimum order quantities.
