Illuminated Poster Units

Your Message Here!

A free-standing illuminated sign with backlit graphics on both sides. This display light column is internally illuminated to produce, what in essence is a double-sided free standing light box. Both sides of the illuminated totem come with a sheet of opal acrylic diffuser and a clear anti-glare front sheet. These are fitted into the system in a curved format for a panoramic perspective, creating a versatile display medium which is both aesthetically pleasing and extremely affective. The totem is very stable. The fluorescent tubes can be changed easily without the need for special tools.

Photocell Technology

Our units all come with a sophisticated light-sensitive photocell to turn them on at dusk, off at dawn, or activate automatically in dark weather, ensuring that your message is always appropriately illuminated.

An internal charger unit also allows your poster unit to be completely free standing if you so wish, it can be placed in position without any trailing leads, this is especially useful if placing the unit where electricity access is a problem.

- **Double Sided**
- **Free Standing**
- **Convex Design**
- **Photocell**
- **No Trailing Leads**
- **Internal Charger**
